PROFILE

Product designer with nearly 2 years of experience designing and shipping enterprise B2B SaaS and computer vision platforms for industrial clients across India. Skilled in end-to-end product design, design system architecture, user research, and front-end implementation in React and TypeScript. Bridges design and engineering through code-first workflows, design tokens, and component-driven development.

EXPERIENCE

Product Designer · Faclon Labs

Jul 2025 – Present

- **Led end-to-end product design** for I/O Vision, a computer vision SaaS platform deployed at industrial plants across India. Owned user research with plant managers and supervisors, information architecture, interaction design, and visual design across three core modules: Camera View, Map View, and Smart View.
- **Designed and documented a 47-component design system** for I/O Vision in Figma, including design tokens (color, typography, spacing, elevation), iconography, motion principles, and component variants. Established naming conventions and dev handoff specs adopted by the engineering team.
- **Architected the Faclon Labs Design System**, a portfolio-wide design system spanning all React-based products. Built a two-layer token architecture (primitive and semantic), light and dark theming from day one, and components mirrored 1:1 between Figma and React. Adopted across the company's modern product suite.
- **Shipped a production React and TypeScript design system codebase** using Claude Code, Figma MCP, and Figma Console MCP. Delivered TypeScript components, Storybook stories, MDX documentation, ESLint rules, and a custom MCP server exposing design tokens and components to AI coding agents organization-wide.
- **Reduced design-to-production time** for new components from 2-3 sprints to a single day by owning the full Figma to Storybook to pull-request pipeline. Replaced design handoff meetings and pixel-diff reviews with code-based PR reviews.

UI/UX Designer · Faclon Labs

Feb 2025 – Jun 2025

- Redesigned legacy platform features to align with current design standards while preserving brand identity, working within constrained design language and engineering capacity.
- Identified gaps in the legacy design language and built the internal case for the new company-wide design system.

Graphic Designer · Bounce Inc.

Jul 2024 – Aug 2024

- Designed marketing assets including banners, social media creatives, and brand visuals for digital campaigns.

SKILLS & TOOLS

UX & Product User research, usability testing, information architecture, interaction design, wireframing, prototyping, user flows, journey mapping

Visual Design Typography, layout, color systems, iconography, motion, responsive design

Design Systems Design tokens (primitive and semantic), atomic design, component libraries, light and dark theming, accessibility (WCAG, ARIA), documentation, dev handoff

Front-End React, TypeScript, JavaScript, HTML, CSS, Storybook, MDX, Git, GitHub, npm, component architecture, design-to-code workflows

AI Tools Claude Code, Figma MCP, OpenAI Codex, Cursor, Figma Make, Vercel V0, Lovable.ai, MCP server development

Design Tools Figma, FigJam, Adobe Photoshop, Illustrator, Notion

Methodologies Agile, Scrum, design thinking, cross-functional collaboration

EDUCATION

B.Tech, Information Technology, K.J. Somaiya Institute of Technology

CGPA 9.03 · 2022–2025

Diploma in Information Technology, Shri Bhagubhai Mafatlal Polytechnic

CGPA 8.9 · 2019–2022

Languages English Professional · Hindi Native · Gujarati Native · Marathi Conversational
